Applicant(s)

BITTERLICH, JEAN-YVES

Examiner

ECE HUR

Art Unit

2109

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 10 March 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 4-6 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 4-6 is/are rejected.
- 7) ☒ Claim(s) 4-6 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 March 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

This action is responsive to application filed on March 10, 2005 and IDS filed on March 10, 2005, in which claims 1-3 are canceled and 4-6 are presented for examination. This application is a new PCT National Stage application of PCT/EP04/51812 that was filed on August 17, 2004. Applicant is claiming foreign priority for the application (EPO) 03020621.3 filed on September 10, 2003.

#### ***Status of Claims***

Claims 1-3 are cancelled in the case.  
Claims 4-6 are pending in the case. Claim 4 is the independent Claim.  
Claims 4-6 are rejected under 35 U.S.C. 112, second paragraph.  
Claims 4-6 are rejected under 35 U.S.C. 103(a).

#### ***Information Disclosure Statement Acknowledgement***

The information disclosure statements filed on March 10, 2005 is in compliance with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609. It has been placed in the application file, the information referred to therein has been considered as to the merits.

#### ***Priority Acknowledgement***

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). Receipt is acknowledged of certified copy of (EPO)

Art Unit: 2109

03020621.3 filed on September 10, 2003 submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Abstract Objection***

The abstract of the disclosure is objected to because of the legal phraseology "means", appropriate correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding Claim 4, Claim 4 is rejected under 35 U.S.C. 112, second paragraph, Claim 4 recites the pronoun "their", pronouns are not permitted and only what is being referred by "their" should be set forth in the claim.

Regarding Claims 5-6, Claims 5-6 are rejected under 35 U.S.C. 112, second paragraph, because the claims recites "the object". It is not clear whether the applicant is referring to the "object computer" or the "object processing", therefore renders the claims indefinite.

Regarding Claim 4, Claim 4 is rejected under 35 U.S.C. 112, second paragraph, recites the limitation "the local processing function" in Claim 4, line 10. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khoo, US 20030227745, in view of Okahara, US 20010004254.

Regarding Claim 4, Khoo discloses the claimed aspect of a method for generating an object processing platform between an object computer and a processing computer, wherein an ad hoc screen assembly is performed by the object computer with the processing computer in order to couple their input and/or output means, wherein two devices can be virtually integrated into a single unitary device, to provide a greater ease of use than a single highly integrated device. Therefore, it is also desirable to provide a system of networking a mobile telephone type device and a PDA type device to produce a portable networked device that combines the features of both devices while allowing both to be used independently from one another. (Khoo, Page 1, Paragraph 0005, lines 11-18).

Khoo discloses the claimed aspect of activating a local file processing function, wherein at least one display (2) belongs to a processing computer

Art Unit: 2109

having an interaction area (IA2), wherein mobile phone 224 and PDA 225 are coupled together over a wireless link 216. For the embodiment of FIG. 2B, both devices implement a wireless protocol that allows them to synchronize their operation and access common data and produce common output. One such wireless protocol is the Bluetooth protocol. Bluetooth is an industry consortium developed technology that defines specifications for small form factor, low-cost, low power consumption, short-range radio links between mobile personal computers, mobile phones and other portable devices. (Khoo, Page 4, Paragraph 0041).

Khoo does not teach the claimed aspect of claimed aspect generating an object processing platform by moving an object from a display (1) belonging to the object computer to the interaction area (IA2) of the display (2) belonging to the processing computer. However, Okahara discloses the claimed aspect generating an object processing platform by moving an object from a display (1) belonging to the object computer to the interaction area (IA2) of the display (2) belonging to the processing computer in FIG. 13, wherein shows a display screen of a terminal operation apparatus used by each electronic conference attendant. An inlet area 95, which is a particular region, is provided in the display screen 91 of the operating terminal 3, and an outlet area 96 is provided in the shared screen 94 of the operated terminal. Herein, the inlet area 95 is to be an element that generates a switching processing event for providing continuity from the operation of the operating terminal 2 to the operated terminal 3, and an outlet area 96 is to be an element that generates a switching processing event for

Art Unit: 2109

providing continuity from the operation of the operated terminal 3 to the operating terminal. (Okahara, Page 14, Paragraph 0206). Furthermore, Okahara discloses that regarding the continuity of the operation of the pointing device, the movement in the display screen 91 of the operating terminal, the movement to the inlet area 95, and the switching to the pointer operation on the shared screen 94 of the operated terminal are continuously and seamlessly conducted, and an operator does not feel discontinuation of the operation. (Okahara, Page 14, 0208).

It would be obvious to one of ordinary skill in the art at the time of the invention to combine Khoo's compound device with Okahara's continuing cursor movement from one device to the other device's display to achieve the claimed moving aspect, because it would allow a pointer operation target to automatically to be switched to ensure continuity of a pointer operation. (Okahara, See Abstract).

Regarding Claim 5, most of the limitations have been met in the rejection of claim 4. See details for Claim 4 rejection. Khoo discloses the claimed aspect of an application-specific processing of the object is started by a further coupling of the object to an application icon on the display (2) belonging to the processing computer, wherein the keyboard map of mobile phone is loaded into active memory of the device, and the input keystrokes to access corresponding keys within the keyboard map. (Khoo, Page 5, Paragraph 0044). Furthermore,

Art Unit: 2109

keyboard map is accessed in FIG. 3D, using the display area 328. (Khoo, Page 4, Paragraph 0036). Applicant should duly note that the keyboard map from the mobile phone is coupled to the display area 328.

It would be obvious to one of ordinary skill in the art at the time of the invention to couple an object to an application icon, because it allow transfer one application from one device to the other device's display.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Khoo, US 20030227745, in view of Okahara, US 20010004254 and in further view of Trueblood, US Patent 5,748,189.

Regarding Claim 6, most of the limitations have been met in the rejection of claim 4. See details for Claim 4 rejection. Khoo and Okahara do not teach specifically the claimed aspect of the object-computer-specific data of the object is converted into application-specific data. However, Trueblood achieves the claimed aspect of the object-computer-specific data of the object is converted into application-specific data, wherein one or more display are coupled to the same work station or to other work stations which are coupled to the main work station through a local area network or the like. Each display apparatus is driven by separate driver software, such as X-server software. (See Abstract, lines 2-4). Furthermore, Trueblood discloses that X-server software normally receives X-Window commands from client programs and cursor control data from the mouse and converts them into control signals understandable by the associated graphic

Art Unit: 2109

controller card 66 or 68. (Trueblood, Column 8, lines 1-4). Additionally, two different display apparatus 62 and 64 are made by different vendors, (Column 8, lines 5-10) and X-server software converts commands and cursor movement data into a form understandable by the graphic controller cards for causing display. (Trueblood, Column 8, lines 14-17).

It would be obvious to one of ordinary skill in the art at the time of the invention, to combine Khoo's compound device and Okahara's shared screen aspect with Trueblood's conversion concept because it would allow different display apparatus to be coupled to one work station. (Trueblood, See Abstract).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- 1) Trueblood, US 5,748,189, 05/05/1998, "Method and apparatus for sharing input devices amongst plural independent graphic display devices".
